

IN THE CLAIMS:

1. (Currently amended) A web service provisioning system for provisioning ~~at least one a~~ plurality of web service services, the provisioning system comprising:

[[a.]] a subscription system including:

[[(i)]] web service description data storage for storing web service description data correlated to ~~the at least one web service~~ each web service of the plurality of web services, wherein the web service description data defines the respective web service in Web Services Definition Language, and

[[(ii)]] provisioning processes data storage for storing respective provisioning processes data ~~correlated to the at least one web service~~ for each web service of the plurality of web services and for each of a plurality of provisioning web services that correlate to respective administrative systems supporting the plurality of web services, wherein the provisioning processes data is in Web Services Flow Language; and

[[b.]] an invocation system operatively coupled to the subscription system and configured for:

receiving a selection of a first web service,

invoking the respective provisioning processes data for the first web service, and

invoking the respective provisioning processes data for each provisioning web service that correlates to an administrative system supporting the first web service.

2. (Currently amended) The web service provisioning system as claimed in claim 1, further comprising a service catalog system configured to ~~select at least one~~ present the plurality of web services using the correlated web service description data and to allow selection of a desired web service.

3. (Currently amended) The web service provisioning system as claimed in claim 2, wherein the service catalog system is further configured to determine user profile data.
4. (Cancelled)
5. (Currently amended) The provisioning system as claimed in claim 1, wherein the provisioning processes data comprises ~~at least one node~~ a plurality of nodes, wherein each node of the plurality of nodes comprises web service invocation data ~~correlated in~~ for invoking [[a]] the respective provisioning web service.
6. (Cancelled)
7. (Cancelled)
8. (Current Amended) A method of provisioning ~~at least one~~ a plurality of web service services, the method comprising: the following Steps:
 - (a) ~~providing user profile data;~~
 - [[b)]] providing web service description data correlated to each web service of the plurality of web services, wherein the web service description data is in Web Services Definition Language; the at least one web Service;
 - [[c)]] providing respective provisioning processes data for each web service of the plurality of web services and for each of a plurality of provisioning web services that correlate to respective administrative systems supporting the plurality of web services, wherein the provisioning processes data is in Web Services Flow Language; correlated to the at least one web Service;
 - [[d)]] ~~selecting at least one~~ receiving a selection of a first web service;
 - [[e)]] invoking the respective provisioning processes data correlated to the selected at least one for the first web service; and
invoking the respective provisioning processes data for each provisioning web service that correlates to a respective administrative system supporting the first web service.

9. (Currently amended) The method as claimed in claim 8, wherein the provisioning processes data comprises ~~at least one node~~ a plurality of nodes, wherein each node comprises web service invocation data correlated to invoking a respective provisioning web service.
10. (Cancelled)
11. (Currently amended) A computer program product stored on computer-readable media and having instructions for directing a computer system to perform the method of claim 8.
12. (New) The provisioning system of claim 1, wherein the plurality of provisioning web services for administering the plurality of web services correlate to administrative systems chosen from a group consisting of a billing system, a security system, and a user profile system.
13. (New) The method of claim 8, wherein the plurality of provisioning web services for administering the plurality of web services correlate to administrative systems chosen from a group consisting of a billing system, a security system, and a user profile system.
